

BSC Die Casting
& Finishing

“ERP is often seen as a low priority, but in this day and age you must be efficient, transparent and accountable at every stage of the project. I am confident that investment in this area is going to be critical to our continued success”

- Managing Director, Les Dudley

Who are BSC Diecasting & Finishing

BSC are experts in producing high quality zinc and aluminium high pressure castings, plastic injection moulding, and finishing.

Needing the right solution

Implementing a fully integrated IT system that covers all BSC's activity while ensuring full traceability, including the planning & execution of manufacturing operations.

 To streamline operations and improve its customer service levels, BSC went on the search for a new IT system that would provide an integrated solution to cover all functions.

 Greater traceability of the stock & purchasing & production planning capabilities, better control, distribution & visibility of information throughout the organisation.

Why Priority?

 BSC has upgraded from working with disparate spreadsheets stored on individual PCs to a state-of-the-art integrated business system. This has allowed much better control, distribution & visibility of information throughout the business.

 With better management of their inventory & sub-contractors, BSC has achieved greater traceability of their current stock & can now plan ahead for both purchasing & production.
